Oka - A, hanging coat rack

Assembly instructions:

A)

B)

1.) plug for screw

2.) thread

3.) screw

4.) dowel with internal thread

height adjustment 5.)

C)
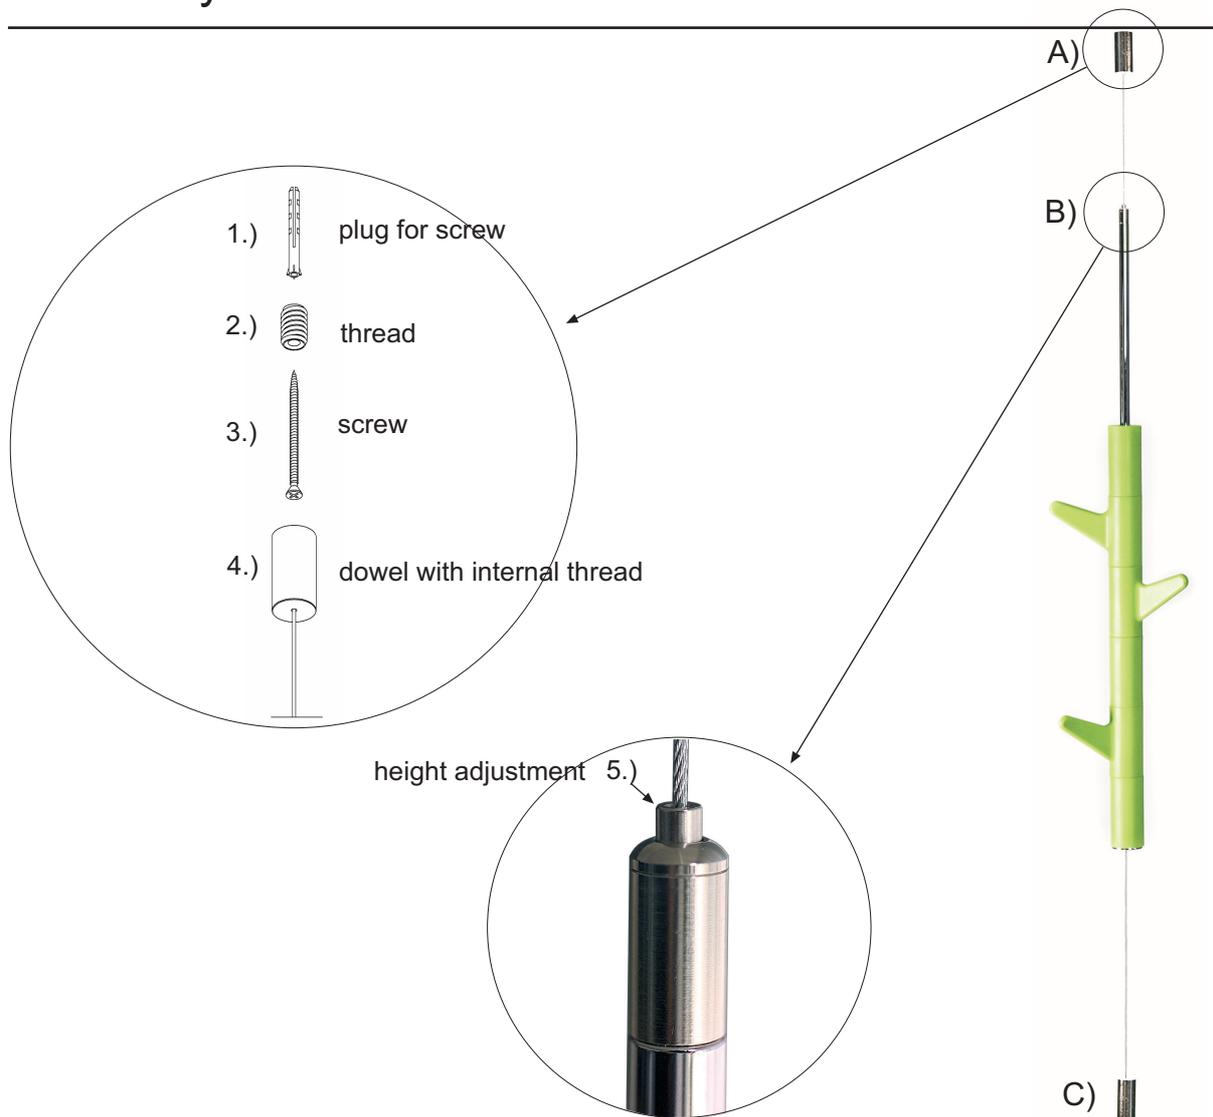

A)   ATTACHING THE COAT RACK TO A CEILING

Fix the thread (2.) with the universal screw (3.) to the strongest point of the ceiling. Depending on the structure of the ceiling, you may need to change the screw and plug (1.) for maximum durability. Secure with the fastening that best suits the ceiling structure. Screw the dowel with internal thread (4.) to the external thread (2.) by rotating.

B)   ADJUSTING THE HEIGHT OF THE COAT RACK

Press the release button (5.) down, and move the coat rack up or down along the wire. Release the button when the preferred height is achieved.

C)   SHORTENING THE WIRE

The standard 2,5 meter long wire is suitable for ceilings up to 3 meters high. In case of lower ceilings, the wire can be cut to the prefered height with a wire rope cutter. Secure the weight to the wire with the spare sleeve, using pincers.
